AIE installs our Remote Monitoring & Management (RMM) agents on all Windows servers. All servers are monitored 24x7x365. Monitoring on Windows OS (virtual/guest or physical) servers includes online status, Windows update status, service availability, antivirus status, resource utilization, and backup status. Monitoring on ESXi (physical/host) servers includes power consumption and status, motherboard resource consumption and status, hard drive health and utilization, RAM and CPU health and utilization, and online status.

Regular Maintenance

AIE provides ongoing maintenance for each Windows server. This maintenance includes the remote Windows patch management, system cleanup, and log file maintenance provided for covered servers. AIE also performs as-needed maintenance for ESXi host servers, to update the operating system and patch the image.

Remote Support

AIE provides phone and remote take-control support for server-related issues, including administration of user accounts, printers and file sharing, repair of failed services such as DHCP or DNS, remediation of issues with LOB applications, remediation of malware, and troubleshooting of backup errors.

Image Backup

AIE will include managed image-level backup (local and cloud) on all servers covered under this agreement. AIE will provide support for the backup system, including monitoring backup success and usage and remediating failed backups. Local backup will be stored on a client-owned storage device capable of supporting RAID and compatible with AIE backup solutions.

Workstation Management

24x7x365 Remote Monitoring & Automated Reporting

AIE installs our Remote Monitoring & Management (RMM) agents on each client workstation, including laptops and kiosk workstations. All workstations that connect to the client network must be monitored by AIE and protected with AIE approved antivirus. Workstations are monitored during business hours, and this monitoring includes resource utilization, Windows update success, and antivirus status and scan results.

Regular Maintenance

AIE provides remote Microsoft patch management and system cleanup for managed workstations.

Microsoft Application Support

AIE provides support for client staff using Microsoft applications on a managed workstation, including Microsoft Office 2013-2019 / Office 365. AIE also provides regular patch management for Microsoft applications on all managed workstations.

Other Application Support

AIE provides help desk support for client staff on LOB applications, to ensure these applications are functioning as deployed. AIE can perform patch management on many line of business applications when specifically contracted with the client.

Anti-Virus & Anti-Spyware Management

AIE provides managed antivirus for all managed workstations. AIE manages this antivirus as part of the included monitoring. In the event that a virus is caught and quarantined, AIE uses additional scans to verify all traces have been removed, in compliance with industry standard best practice. AIE also administers an email threat training program for all client end-users, including simulated phishing campaigns and online training tools.

Assistance with End-User Devices

AIE understands that in an increasing BYOD (Bring Your Own Device) world, client employees require ongoing support for their cellular devices, including smart phones. BYOD devices must be connected to a guest network if they are not managed by AIE. AIE provides basic support for guest wireless and email connectivity for client employees.

In order to facilitate a quality support experience, client agrees to keep spare workstations at a ratio of no less than one spare computer per 25 users.

Security Management

Threat Detection Monitoring

AIE employs a managed SOC (Security Operation Center) service that leverages a threat monitoring platform capable of detecting malicious and suspicious activity across three critical attack vectors: endpoint, network and cloud (e.g. O365). This service is comprised of a live team of security experts who proactively monitor activity throughout the entire network for any indication of security threats. AIE and the managed SOC work together to perform the triage of detected activities and work together for remediation when an actionable threat is discovered. This service is designed to mitigate the risk of real time threats including hacking, data exfiltration and ransomware.

Anti-Malware Monitoring

Managed anti-virus is included in AIE's service contract agreements. Scanning schedules, anti-virus engine updates and virus definition updates are all managed from a central source. When a virus is detected and quarantined, AIE staff are notified and can perform additional scans to ensure that no traces of infection remain.

Security Awareness Training

AIE implements and manages periodic, simulated phishing attacks coupled with security awareness training campaigns as part of service contracts. These simulations and training campaigns educate a client's employees on cybersecurity practices and practical steps that can be taken to avoid phishing attacks or other forms of network breaches.

Security Vulnerability Scans & Reporting

AIE analyzes the security posturing of our clients' networks via routine security vulnerability scanning. This ongoing scanning detects external vulnerabilities, anomalous logins, and other abnormal activity, and it provides a convenient means of assessing a network's security policies, any data containing PII, share permissions and more. Scan results are then reviewed and any needed remediation steps identified, which in turn are presented to clients as action items during business reviews.

Spam Filtering

AIE provides spam filtering services in order to detect and quarantine spam, messages with malicious attachments, info-mail, and other threats or nuisance messages, preventing them from filling your users' email inboxes.

Dark Web Monitoring

Hackers and other threat actors harvest credentials from users through phishing attacks, keyloggers, and other means. These credentials are valuable because they represent a potential entry point into a company's network, so many of these credentials are re-sold on a black market that has become known as the Dark Web. AIE helps protect against this vulnerability by implementing Dark Web Monitoring, which watches various known sources of stolen credentials and alerts our staff if a username from your company's domain is detected. This provides a warning so that compromised passwords can be changed, thereby blocking malicious use of the exposed credentials.

Office 365/Cloud Backup

Data stored in Microsoft 365 needs to be backed up just like data stored on a server in your network closet. AIE provides backup services for data stored in Microsoft 365, including e-mail, SharePoint/OneDrive data, and more.

2-Factor Authentication

Advanced Intelligence Engineering

Passwords by themselves are no longer secure enough. Multi-factor authentication is needed in order to secure e-mail and other accounts, and AIE implements multi-factor authentication for all users of Office 365 e-mail along with other e-mail environments and applications in your organization's environment that support it.

Privileged Access Management

Many users have administrative access to their computers through the accounts they use on a day-to-day basis, and this represents a significant security risk because of the potential for malicious software to install itself from infected websites or e-mail messages. However, some users need administrative access frequently because of a need to install or uninstall software from their computers. AIE provides a solution through Privileged Access Management service, which provides controlled administrative access on demand to users to install and run pre-approved software while allowing AIE staff to evaluate and approve other requests for administrative access as necessary.

For effective security, services listed here must be deployed throughout the entirety of the client's environment, be it on servers, workstations, in a cloud environment (such as Microsoft 365), in the network infrastructure (routers, switches, and firewalls), or elsewhere. Devices left unmonitored or unprotected introduce a significant risk to security of the network as a whole, and as such they are not allowed in the network without express client acknowledgement of the risk and liability.

Project Management

Project management and project engineering rates are billed at \$190 per hour. Billing for project management engagements require a down payment with subsequent charges occurring at the close of specified milestones.

Project Development

Work with client decision makers to determine and document functional and technical requirements for the project. Identify and evaluate potential solutions that may meet the requirements. Engage vendors to confirm requirements and pricing. Develop initial project plan, including phases/milestones and schedule.

Kickoff Call

Work with vendors and key stakeholders to schedule kickoff meetings for new project implementations. Review the project timeline, project milestones, project team members, and any prerequisites or impediments to commencing project work.

Project Status Meetings

Coordinate and lead regular project status meetings at a cadence that makes sense for key stakeholders and vendors (generally weekly or biweekly). Track the project schedule and tasks and whether any impediments need to be addressed.

Project Communication

Facilitate communication between project team members and vendors, especially as it relates to follow-ups from the project status meetings. Ensure that all project team members receive updates to the project schedule and task assignments in a timely manner.

vCIO Services

■ IT Budget Planning

AIE participates in ongoing development of long-term IT budget needs and communicates these to key decision makers at client to facilitate long-term strategy planning for network/technology maintenance, improvement, and security.

■ IT Consulting Services

AIE works alongside key decision makers to recommend technology-based solutions to business problems for the purpose of streamlining client's workflows and increasing efficiency.

Service Level Agreement

AIE commits to the following response time service level agreement as a part of our managed IT services agreement.

For the purposes of determining Service Level Agreements (SLA's), AIE separates tickets into different priority categories. Priority is determined by the business disruption. For example, one person not being able to print has minimal business impact if that person is a part-time intern trying to print expense reports. One person not being able to print has significant business impact if that person is in payroll and can't print paychecks, thus affecting all employees.

For the purposes of determining business impact, "down" means that a person or department is unable to do a major business function. "Impaired" means that a person or department has a work-around available to them, or is unable to do a minor business function (e.g. – can't open Excel files from Outlook, but can save them to desktop and then open).

TROUBLE THRESHOLD	PRIORITY	FIRST RESPONSE	ESCALATION & DISPATCH	RESOLUTION TIME
General Network Down Internet Down Major Server Down	Critical	1 business hour	2 business hours	ASAP – Best Effort
General Network Impaired Department Down Minor Server Down Major Application Down Major Device Down VIP Down	High	2 business Hours	4 business hours	ASAP – Best Effort
Localized Network Impaired Department Impaired VIP Impaired Any Person Down	Medium	4 business hours	1 business day	ASAP – Best Effort
Any Person Impaired Minor Device Down Minor Application Down Required Re-Configurations	Low	1 business day	2 business days	ASAP – Best Effort
Maintenance Upgrades Non-Critical Vendor Calls	When Convenient	2 business days	N/A	Best Effort

AIE works to ensure that issues are resolved as quickly as possible, based upon priority. Back-end issues with Microsoft's cloud services are dependent upon the responsiveness of Microsoft support personnel, and AIE cannot guarantee remediation times. Additionally, remediation times on LOB application issues are dependent upon responsiveness of third-party vendor support personnel, and these applications are supported on a best-effort basis.
